

Tory Government Climate Killers!

Plymouth Climate Council Newsletter April 2023: Stop the Unabated Fossil Fuel Expansion!

UK Government Approves Rosebank Oil & Gas field off Shetland Isles!

In March, the UN IPCC AR6 Synopsis Report was published*, detailing the drastic need to cut emissions by 50% by 2030 and to zero by 2038 if we are to avoid global climate catastrophe. Even were this to be achieved, a global average temperature rise of 1.5C is built in, with forced mass human migration of a billion and the loss of at least 70% of plant and animal species. This is the greatest emergency humanity has ever faced.

The climate crisis is evidently existential. Yet governments, including here, are supporting and promoting more fossil fuels, producing more global heating emissions that are destroying the ecology, writes Tony Staunton of the Campaign against Climate Change..

In the UK, over £8 billion of oil and gas projects are being unleashed, with new UK oil & gas fields and coal mines doing nothing to help with energy bills, but accelerating climate breakdown. Huge investment by banks in fossil fuels is happening despite the stark warning from scientists that to avoid collapse there can be no new investments in oil, gas and coal. Just Stop Oil!

Demand Zero Emissions

Climate campaigners, together with trade unionists and human rights advocates must put significant pressure upon governments and corporations. Expose the greenwash lies and force the emergency transition away from fossil fuels and into an economic drive for climate jobs to produce a zero-emissions economy without delay.
